The TTU-205 Remote Control unit (RCU) enables complete testing with the TTU-205 Series Test Sets, directly from the cockpit. A single operator can perform all testing, by commanding Airspeed and Altitude commands from the RCU's front panel - all while maintaining visual contact on the instruments under test.

The rugged and lightweight and RCU's portability makes it an ideal tool for troubleshooting problems. Additionally, it can minimize potential instrument damage by allowing technicians to simultaneously control the test equipment while keeping an eye on the instrument under test. It can also reduce overall maintenance costs by substantially cutting the time it takes to troubleshoot and test an instrument..

- 50' or 100' foot test cable included
- Rugged, yet lightweight RCU weighs only 5.5 lbs
- Available in Yellow, Green and Gray. Call for availability
Storage cases provided based on availability
